

- Important commands (e.g. on demand meter reads, disconnection, load limitation, pre-payment)
- Customer API for interfacing with customer portal solutions or Apps; alternatively, our **zonos Module PortalBasic** can be used
- Metering of consumption and production with flexible hierarchical configuration through sub- and virtual meter functionality Features
- Centralized and uniform event and alarm management
- Various market conformant communication formats and protocols
- Extensive process management via **zonos API** and easy interfacing with Business Process Management (BPM) solutions
- Powerful data analytics via our **zonos Module ReportPlus**
- Connectors for billing and asset management systems such as SAP MDUS
- Direct integration of **zonos AMM** or other head-end systems
- Import and Export: wide range of web services and file formats
- Energy Management and Smart Grid applications (including non-technical losses) through sub- and virtual meters
- Flexible roles and rights management
- Functional extension through use of other optional **zonos modules**

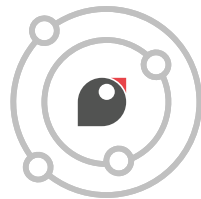

Advantages

- Multi-utility support (power, gas, water, heat, etc.) and multi-tenancy gives great flexibility and scale advantages
- Configurable Validation, Estimation and Editing (VEE) rules provide maximum flexibility
- Advanced tariffing engine enables easy commercialisation of Smart Metering data
- End-to-end Smart Metering processes through out-of-the-box interfaces to existing systems (e.g. SAP MDUS, Oracle CCMB) reduce integration cost

zonosTM MDM supports all core utility processes allowing an easy configuration of move-ins and move-outs, customer changes, innovative tariffing schemes, device-related processes (e.g. disconnection, load limitation) or a central pre-payment solution. It can be interfaced with existing billing, market communication and other systems.

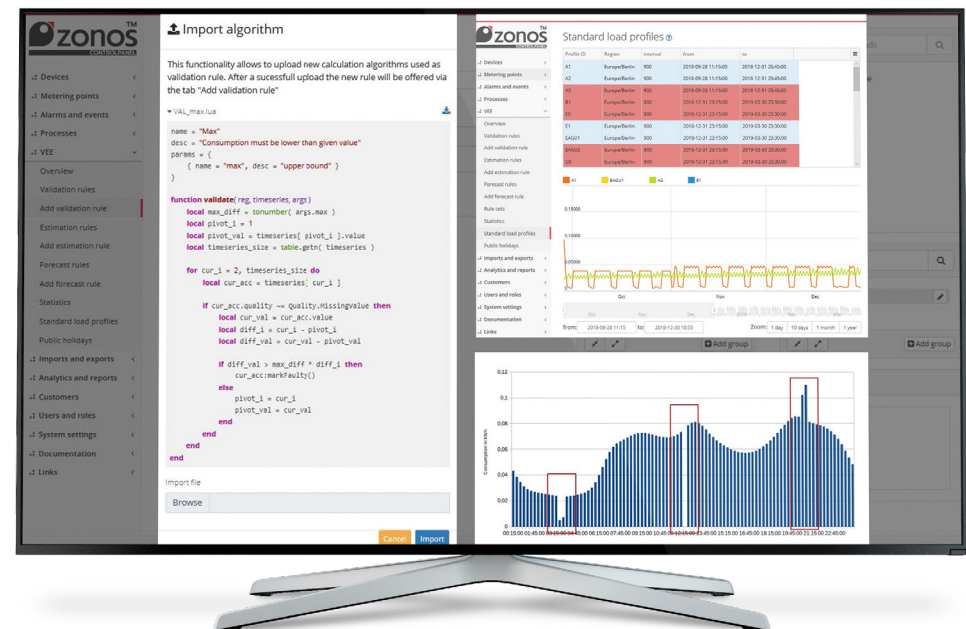

zonosTM MDM can be complemented through optional **zonosTM modules** (e.g. PortalBasic, ReportPlus) enabling powerful customer interaction, implementation of customer loyalty programs or offering of completely new services as well as advanced data analytics and reporting.
