

Software Test Engineer (m/f/d)

Cuculus is the key to providing utilities to all, while protecting the world's precious resources. Jointly with our international partner network, we provide cutting-edge software and technology solutions to address utility challenges now and in the future. Cuculus will never tire of creating innovative technology and services that enable utilities and organisations to successfully transition to a new era of providing and managing electricity, water, and gas. The work we do is important for individuals, cities, and entire nations. Our work is serious, but we have fun with it, too.

Shape the utilities market of the future with us. Join our team in full time as Software Test Engineer (m/f/d)

What is the role about?

- Creation of product-specific test concepts, design of test case scenarios, execution of tests, and error management.
- Monitoring of test progress using appropriate metrics and analysis of test results.
- Consulting and coaching in all project phases in the application of standardized test methods and tools with a focus on achieving defined quality goals.
- Recommendation for the release of software versions and GUIs for productive operation.
- Continuous improvement of test processes and automation of test runs.
- Treatment of indicators used in reports and full documentation.
- Review of test cases based on the specifications of the test concept and test strategy
- Continuous quality assurance from the goals, requirements, and user stories to the test cases.

You fit in with us, if...

- You have sound knowledge and several years of experience in test planning and test management.
- You are experienced in performing manual and automated system tests.
- You are experienced in Python language for automation build testing.
- You are familiar with the documentation, processing, and analysis of tests and their results.
- You have first experience in dealing with ticketing systems and configuration management.
- You ideally have first experience in cooperation with international customers in technically demanding projects.
- You are experienced in quality management (DIN EN ISO 9001).
- Good knowledge of English, speaking German is a plus.

What's in for you:

- Being part of an internationally acting and constantly growing technology company.
- Flat hierarchies and the chance to really make a difference and see your ideas grow into real projects.
- A permanent employment contract with fair conditions and flexible working hours and the possibility to work from home - no ifs and buts.
- A pleasant, informal and open working environment with modern equipment, fresh fruit and drinks for free as well as regular team events and workshops.
- Other benefits including e.g. day-care allowance, bike leasing and company pension scheme.
- Relocation Support if you decide to join us in one of our offices (Leipzig, Erfurt, or Ilmenau) in Germany.

Sounds interesting? Great, let's get to know each other. Send your application to jobs@cuculus.net and let us know why we could be a great match!
